Since the credit crunch crisis there have been a number of developments which require separate consideration and approval for use:

Nationalised banks - in the UK have credit ratings which do not conform to the credit criteria usually used by local authorities to identify banks which are of high credit worthiness. In particular, as they no longer are separate institutions in their own right, it is impossible for Fitch to assign them an individual rating for their stand alone financial strength. Accordingly, Fitch has assigned an “F” rating which means that at a historical point of time, this bank failed and is now owned by the Government. However, these institutions are now recipients of an F1+ short term rating as they effectively take on the creditworthiness of the Government itself i.e. deposits made with them are effectively being made to the Government. They also have a support rating of 1. In other words, on both counts, they have the highest ratings possible.

Blanket guarantees on all deposits - Some countries have supported their banking system by giving a blanket guarantee on ALL deposits e.g. Ireland and Singapore. An The Council does not take the view that the sovereign rating of a country then takes precedence over the individual credit ratings for the banks covered by that guarantee, and chooses not to rely on these blanket guarantees to authorise lending to banks covered by these guarantees.

UK banking system support package - The UK Government has NOT given a blanket guarantee on all deposits but has underlined its determination to ensure the security of the UK banking system by supporting eight named banks with a £500bn support package. The Head of Corporate services may make a decision authorise lending to these named banks, on the basis of an implicit guarantee on local authority deposits placed with these eight banks, or based on the credit ratings of the individual banks.

Other countries – The Head of Corporate Services may also make a decision to rely on “implicit” guarantees made for the banking systems of other countries. The US, countries within the EU and Switzerland (and other countries) are currently providing major support packages to their banking systems.

The prohibition on the use of derivatives: This prohibition effectively relies on the judgement of the House of Lords in the case of *Hazell v The Council of the London Borough of Hammersmith and Fulham and Others* in 1991. Their Lordships held that local authorities have no power to enter into interest rate swaps and similar instruments. Sector believes that as this ruling still stands and will not be rescinded by the introduction of the Local Government Act 2003, local authorities will not have the power to use derivative instruments.
