

DDA Compliant Ramp

- The required ground footprint for the ramps supplied with Units 10 to 16 is
- 1.8 metres x 3.6 metres. The ramp can be positioned vertically from the shop door entrance or horizontally facing either left or right to suit shop access requirements. The three Images given here illustrate this.

Important Information

Ahead of deployment a 63 amp single phase female power connection must be made available so that a full handover process can be completed. The images below show the male connection attached to the unit and the commando socket which will need to be connected to power the shop.
