

Report to Cabinet

Subject: Prudential and Treasury Indicators and Treasury Strategy
2016/17

Date: 18 February 2016

Author: Chief Financial Officer

Wards Affected

All

Purpose

To present, for members' approval, the Council's Prudential Code Indicators and Treasury Strategy for 2016/17.

Key Decision

This is not a key decision.

Background

1.1 Definition of treasury management

Treasury management is defined as “the management of the local authority’s investments and cash flows, its banking, money-market and capital-market transactions; the effective control of the risks associated with those activities, and the pursuit of optimum performance consistent with those risks.”

The Council is required to operate a “balanced budget”, which broadly means that cash raised during the year will meet cash expenditure. The Localism Act 2011 places a duty on a local authority to calculate its “council tax requirement” for each financial year, and this includes the revenue costs which result from the capital investment decisions of the authority.

Part of the treasury management service is to ensure that cashflow is adequately planned, with cash available when it is needed. Surplus cash is invested with counterparties commensurate with the Council’s low risk appetite, providing adequate liquidity before considering investment return.

A further treasury management function is the funding of the Council's capital plans. These plans provide a guide to the Council's borrowing needs, and require longer term cashflow planning to ensure the Council can meet its spending obligations. The management of longer term cash may involve arranging long or short-term loans or the use of longer term cashflow surpluses. On occasion, debt previously drawn may be restructured to meet the Council's risk or cost objectives.

1.2 Statutory reporting requirements

The Council is required to receive and approve, as a minimum, three main reports each year, which incorporate a variety of policies, estimates and actuals.

1.2.1 Prudential and treasury indicators and treasury strategy (this report)

This first, and most important report covers:

- The capital plans (including prudential indicators),
- A minimum revenue provision (MRP) policy (how residual capital expenditure is charged to revenue over time),
- The treasury management strategy (how the investments and borrowings are to be organised) including treasury indicators,
- An investment strategy (the parameters on how investments are to be managed).

1.2.2 Mid-year treasury management report

This updates members on the progress of the capital position, amending prudential indicators as necessary, and whether the treasury strategy is appropriate or whether any policies require revision. The Council has adopted a policy of presenting quarterly treasury management reports to Cabinet, and this exceeds the minimum requirement.

1.2.3 Annual treasury report

This provides details of a selection of actual prudential and treasury indicators and actual treasury operations compared to the estimates within the strategy.

1.2.4 Scrutiny

All treasury management reports are required to be adequately scrutinised before being recommended to Council. This role is undertaken by Cabinet. The TMSS is part of the Council's Budget and Policy Framework and accordingly the Chair of the Overview and Scrutiny Committee has also been notified. Any comments received will be taken into account before referral to Council.

1.3 Treasury management strategy for 2016/17

The strategy for 2016/17 covers two main areas:

Capital issues:

- the capital plans and the prudential indicators
- the minimum revenue provision (MRP) policy

Treasury management Issues:

- the current treasury position
- treasury indicators which limit the treasury risk and activities of the Council
- prospects for interest rates
- the borrowing strategy
- policy on borrowing in advance of need
- debt rescheduling
- the investment strategy
- creditworthiness policy
- policy on use of external service providers

These elements cover the requirements of the Local Government Act 2003, the CIPFA Prudential Code, Communities and Local Government (CLG) MRP Guidance, the CIPFA Treasury Management Code and CLG Investment Guidance.

1.4 Training

The CIPFA Code requires the responsible officer to ensure that members with responsibility for treasury management receive adequate training in treasury management. This especially applies to members responsible for scrutiny, ie. Cabinet, and the Chief Financial Officer will arrange training as required.

The training needs of officers involved with treasury management are reviewed periodically.

1.5 Treasury management consultants

The Council uses Capita Asset Services (CAS) as its treasury management advisors, recognising that there is value in employing external providers in order to acquire access to specialist skills and resources. The Council will ensure that the terms of appointment and the methods by which value will be assessed are properly agreed and documented, and subjected to regular review. The Council recognises that responsibility for treasury management decisions remains with the organisation at all times, and will ensure that undue reliance is not placed upon the external service providers.

Proposal

2.1 The Prudential Indicators 2016/17 to 2018/19

The Council's capital expenditure plans are the key driver of treasury management activity. The output of the capital expenditure plans is reflected in prudential indicators, which are designed to assist members to overview and confirm such capital expenditure plans. The indicators for 2016/17 to 2018/19 are attached at Appendix 1.

2.1.1 Capital expenditure

The indicator includes a summary of the proposed capital expenditure plans for 2016/17 to 2018/19.

Portfolio Capital Expenditure:	2016/17 Estimate	2017/18 Estimate	2018/19 Estimate
	£	£	£
Housing, Health & Wellbeing	1,436,600	689,000	689,000
Public Protection	50,000	0	0
Environment	2,716,000	1,052,500	978,000
Resources & Reputation	164,300	150,000	150,000
Equipment Replacement	0	150,000	150,000
Development Bids	0	100,000	100,000
Total Expenditure	4,366,900	2,141,500	2,067,000

The table below summarises the above capital expenditure plans and how these are being financed by capital or revenue resources. Any shortfall of resources results in a borrowing need.

Resources:	2016/17 Estimate	2017/18 Estimate	2018/19 Estimate
	£	£	£
Capital Exp £m (above)	4,366,900	2,141,500	2,067,000
Financed by:			
Capital receipts	1,021,500	1,061,000	811,000
Capital grants & contributions	834,000	464,000	464,000
Direct Revenue Financing	550,000	0	0
Net borrowing need	1,961,400	616,500	792,000

2.1.2 The Council's borrowing need – the Capital Financing Requirement (CFR)

In simple terms, the CFR is the total historic outstanding capital expenditure which has not yet been paid for, from either revenue or capital resources. It is essentially a measure of the Council's underlying borrowing need. Any capital expenditure in the tables above, which has not immediately been paid for by way of capital receipts, grants or contributions, will increase the Council's CFR.

The CFR does not increase indefinitely, as the minimum revenue provision (MRP) is a statutory annual revenue charge which broadly reduces the borrowing need in line with each asset's life.

The CFR can include any other long term liabilities, for example finance leases and PFI schemes. Whilst these would increase the CFR, and therefore the borrowing requirement, such schemes would include their own borrowing facilities and the Council would not be required to separately borrow for them. The Council has no such schemes within its CFR.

	2016/17 Estimate	2017/18 Estimate	2018/19 Estimate
	£	£	£
Capital Financing Requirement (CFR):			
Closing CFR	13,030,300	12,336,700	11,559,500
Movement in CFR	1,447,200	-693,600	-777,200
The movement on the CFR is represented by:			
Net financing need for the year	1,961,400	616,500	792,000
Application of LAMS capital receipt	0	-700,000	-1,000,000
Less Gross MRP	-514,200	-610,100	-569,200
Movement in CFR	1,447,200	-693,600	-777,200

2.1.3 Minimum Revenue Provision (MRP) Policy Statement

The Council is required to pay off an element of the accumulated General Fund capital spending (CFR) each year by way of a minimum revenue provision (MRP). It is also allowed to make an additional voluntary revenue provision if it wishes (VRP).

CLG regulations require the full Council to approve an MRP Statement in advance of each year. A variety of options is provided to councils, but there

must be “prudent provision”. The guidance does not, however, define “prudent”, instead making recommendations on the interpretation of the term. It is the responsibility of each authority to decide upon the most appropriate method of making a prudent MRP, having had regard to the guidance and its own circumstances, the broad aim being to ensure that borrowing is repaid over a period that reflects the useful lives of the assets acquired. The Council is obliged to have regard to the CLG guidance, but it is not prescriptive. The Council is recommended to approve the following MRP Statement for 2016/17.

- a. The Council will assess MRP in accordance with the recommendations within the guidance issued under section 21(1A) of the Local Government Act 2003.
- b. Option 2, the CFR method, will be used for calculating MRP in respect of all capital expenditure incurred up to and including 31 March 2008. This is the simplest approach available, being calculated as a straightforward 4% of the relevant element of the CFR at the end of the previous year. In the current economic climate the Chief Financial Officer considers that the use of Option 2 is prudent.
- c. Option 3, the Asset Life Method, will be used for calculating MRP in respect of all capital expenditure incurred on and after 1 April 2008. An equal instalment approach will be adopted.
- d. The Chief Financial Officer will determine estimated asset lives. Where expenditure of different types is involved, it will be grouped together in a manner which best reflects the nature of the main component of expenditure. It will only be divided up in cases where there are two or more major components, with significantly different asset lives.
- e. The Council currently operates two cash-backed Local Authority Mortgage Schemes (LAMS), each scheme based on a five-year advance to Lloyds TSB to match the five-year life of the indemnity. Each advance placed with Lloyds provides an integral part of the mortgage lending, and is treated as capital expenditure, and a loan to a third party, therefore the Capital Financing Requirement (CFR) increases by the amount of the advance. Each advance is to be returned at maturity and the funds will be classed as capital receipts, and the CFR will then reduce accordingly. As the advances are temporary (5-year) arrangements, there is no need to set aside prudent provision to repay the debt liability in the interim period, and there is accordingly no MRP application.
- f. In view of the economic climate and significant budgetary pressures, the Council will not provide for an additional voluntary contribution to MRP in 2016/17.

Based on the above policy, the net MRP charge for 2016/17 has been calculated as £513,000 as detailed below, and this sum has been included in the Council's 2016/17 budget proposals. The exact amount of MRP will be subject to change should capital financing decisions alter during the year.

	£
Option 2 – CFR Method	£249,900
Option 3 – Asset Life Method	£264,300
Gross MRP	£514,200
Funded by NCC-transferred debt	-£1,200
Net MRP	£513,000

2.1.4 Capital Affordability Prudential Indicators

The previous sections cover the overall “capital” and “control of borrowing” prudential indicators, but within this framework additional prudential indicators are required to further assess the affordability of the capital investment plans. These provide an indication of the impact of the capital investment plans on the Council's overall finances. The 2016/17 Capital Programme report, an item elsewhere on this agenda, provides full details of the proposed programme. The indicators, which can be found at Appendix 1, represent capital investment plans that have been fully factored into the Council's medium term financial plan, and are assessed as affordable, prudent and sustainable, subject to securing the commitment to delivering an efficiency programme of £1.15m in the medium term, as proposed in the Gedling Plan report elsewhere on this agenda. The indicators include:

- a. Capital expenditure (see 2.1.1)
- b. Capital Financing Requirement (CFR)
- c. Ratio of financing costs to net revenue stream

This indicator identifies the trend in the cost of capital (borrowing and other long term obligation costs net of investment income) against the net revenue stream. Estimates of financing costs include current commitments and the proposals included in the Gedling Plan report elsewhere on this agenda.

- d. Incremental Impact of capital investment decisions on Council Tax

This indicator identifies the revenue costs associated with proposed changes to the three year capital programme recommended in the Gedling Plan report elsewhere on this agenda, compared to the Council's existing approved commitments and current plans.

As detailed in the Capital Programme report elsewhere on this agenda, contributions totalling £550,000 from the revenue budget are recommended to finance the 2016/17 capital programme and this is assessed as affordable.

e. Maximum Gross Debt

The Council must ensure that its gross debt does not, except in the short term, exceed the total of the opening capital financing requirement, plus estimates of any additional CFR for the year in question and the following two financial years (reductions are ignored). This allows flexibility for early borrowing for future years, but ensures that borrowing is not undertaken for revenue purposes.

2.2 Treasury Strategy 2016/17 - Borrowing and Investment

The capital expenditure plans set out above provide details of the Council's service activity. The treasury management function ensures that the Council's cash is organised in accordance with the relevant professional codes, so that sufficient cash is available to meet this activity. This will involve both the organisation of the cash flow and, where necessary, the organisation of appropriate borrowing facilities. The Treasury Strategy covers the relevant treasury and prudential indicators, the current and projected debt positions and the annual investment strategy.

2.2.1 Projected portfolio position

The Council's forward projection on its treasury portfolio position is summarised below. This shows the actual external debt, ie. the treasury management operations, against the underlying capital borrowing need, ie. the Capital Financing Requirement (CFR), highlighting any over or under borrowing.

Actual Gross Debt compared to CFR	2016/17 Est £000s	2017/18 Est £000s	2018/19 Est £000s
Debt 1 April	7,812	6,812	6,812
Change in debt in year	-1,000	0	0
Other long term liabilities	0	0	0
Gross Debt 31 March	6,812	6,812	6,812
Closing CFR	13,030	12,337	11,559
Under/(over) borrowing	6,218	5,525	4,747

Within the prudential indicators there are a number of key indicators to ensure that the Council operates its activities within well-defined limits. As detailed at 2.1.4 (e) above, to comply with the "gross debt" indicator,

the Council must ensure that its gross debt does not, except in the short term, exceed the total of the CFR in the preceding year plus the estimates of any **additional** CFR for 2016/17 and the following two financial years. This allows some flexibility for limited early borrowing for future years, but ensures that borrowing is not undertaken for revenue purposes.

The Chief Financial Officer can report that the Council has complied with this prudential indicator during the current year, 2015/16, and does not envisage difficulties for the future. This view takes into account current commitments, existing plans, and the proposals in this budget report.

Maximum Gross Debt	2016/17 Estimate £000s	2017/18 Estimate £000s	2018/19 Estimate £000s
Opening CFR (closing CFR preceding year)	11,583	13,030	12,336
Additions (only) in-year + following 2 years	1,447	0	91
Maximum Gross Debt	13,030	13,030	12,427
Est. debt at 31 March	6,812	6,812	6,812
Under/(over) borrowing	6,218	6,218	5,615

2.2.2 Treasury indicators – affordability limits to borrowing (Appendix 1)

a. The Operational Boundary for external debt

This is the limit which external debt is not “normally” expected to exceed. In most cases, this would be a similar figure to the CFR, but it may be lower or higher depending on the levels of actual debt.

b. The Authorised Limit for external debt

This limit represents a control on the “maximum” level of borrowing. It is the statutory limit determined under s3 (1) of the Local Government Act 2003 and represents the limit beyond which external debt is prohibited. The Authorised Limit must be set, and revised if necessary, by Full Council. It reflects a level of external debt which, while not desirable, could be afforded in the short term, but is not sustainable in the longer term. The Government retains an option to control either the total of all councils’ plans, or those of a specific council, although this power has not yet been exercised.

2.2.3 Prospects for Interest Rates

The Council has appointed Capita Asset Services (CAS) as its treasury advisor and part of their service is to assist the Council to formulate a view on

interest rates. The following table gives the CAS central view as at 20 January 2016 and further information on interest rates can be found at Appendix 2.

	Mar-16	Jun-16	Sep-16	Dec-16	Mar-17	Jun-17	Sep-17	Dec-17	Mar-18	Jun-18	Sep-18	Dec-18	Mar-19
Bank rate	0.50%	0.50%	0.50%	0.75%	0.75%	1.00%	1.00%	1.25%	1.25%	1.50%	1.50%	1.75%	1.75%
5yr PWLB rate	2.00%	2.10%	2.20%	2.30%	2.40%	2.50%	2.60%	2.70%	2.80%	2.90%	3.00%	3.10%	3.20%
10yr PWLB rate	2.60%	2.70%	2.80%	2.90%	3.00%	3.10%	3.20%	3.30%	3.40%	3.50%	3.60%	3.60%	3.70%
25yr PWLB rate	3.40%	3.40%	3.50%	3.60%	3.70%	3.70%	3.80%	3.90%	4.00%	4.00%	4.10%	4.10%	4.10%
50yr PWLB rate	3.20%	3.20%	3.30%	3.40%	3.50%	3.60%	3.70%	3.80%	3.90%	3.90%	4.00%	4.00%	4.00%

UK GDP growth rates of 2.2% in 2013 and 2.9% in 2014 were the strongest of any of the world's seven most powerful industrialised countries (G7). Although growth for 2015 is again expected to be a leading rate it currently looks likely to be lower than previous forecasts at around 2%. The November Bank of England Inflation Report included a forecast for growth to remain around 2.5% to 2.7% over the next three years, driven mainly by consumer demand as the squeeze on disposable income is reversed by a recovery in wage inflation. At the same time, CPI inflation has fallen to, or near to, zero since February 2015. Investment expenditure is also expected to support growth. However, since the August inflation report was issued, most worldwide statistics have been weak and financial markets have been particularly volatile. The November inflation report flagged up particular concerns for the potential impact of these factors on the UK.

The inflation report was also subdued in respect of the forecasts for inflation, with the rate expected to barely get back up to the 2% target within the next 2 to 3 years. The increase in the forecast at the two year horizon was the biggest since February 2013, however as the first round of falls in fuel and food prices over late 2014 and early 2015 fall out of the 12 month calculation of CPI, the more recent round of falls in fuel prices will now delay a significant tick up in inflation from around zero. This is now expected to get back to around 1% by the end of 2016 and not get to near 2% until the second half of 2017, although forecasts in the report itself were for an even slower rate of increase. However, more falls in the price of oil and imports from emerging countries in early 2016 will further delay the pickup in inflation. There is therefore considerable uncertainty around how quickly pay and CPI inflation will rise in the next few years, and this increases uncertainty as to when the Monetary Policy Committee (MPC) will start to increase Bank Rate.

The weakening of UK GDP growth during 2015 and the deterioration of prospects on the international scene, especially from the emerging market

countries, have led to forecasts for when the first rise in Bank Rate will occur to be pushed back to Q4 of 2016. There is downside risk to this forecast, ie. it could be pushed back still further.

The US economy grew by 3.9% in Q2 of 2015, but this fell back to 2.0% in Q3. The Federal Reserve (Fed) embarked on its long awaited first rate increase of 0.25% at its December meeting, however, the accompanying message was that further increases will be at a much slower rate and to a lower ceiling than in previous business cycles, mirroring comments by the MPC in the UK.

In the Eurozone, the European Central Bank (ECB) launched a programme of quantitative easing (QE) in March 2015, which is expected to run until at least September 2016. This appears to have had a positive effect in helping a recovery in consumer and business confidence, and a start to improvements in economic growth. However, recent downbeat news from China and Japan has raised questions as to whether the ECB will have to boost its QE programme if it is to significantly improve growth and get inflation up from its current level around zero to its 2% target.

Greece finally capitulated in July 2015 to EU demands for the implementation of a major austerity programme. A third bailout was agreed however it did nothing to address the unsupportable size of debt compared to GDP. Huge damage has been done to the Greek economy and banking system and serious doubts remain whether the size of the cuts and the degree of reforms required can be fully implemented, meaning that a Greek exit from the euro may only have been delayed by the latest bailout.

Recent general elections in Portugal and Spain have opened new areas of political risk, whereby previous reform focussed pro-austerity mainstream parties have lost power. A coalition in Portugal is heading towards unravelling previous pro-austerity reforms and this outcome could be replicated in Spain. This has created nervousness in bond and equity markets in these countries, and has the potential to impact on the whole Eurozone.

- Investment returns are likely to remain relatively low during 2016/17 and beyond.
- Borrowing rates have been highly volatile during 2015 as alternating bouts of good and bad news have promoted optimism and then pessimism in the financial markets. Gilt yields have remained at historically low levels. The policy of avoiding new borrowing by running down spare cash balances has served well over the last few years, however this needs to be carefully reviewed to avoid incurring higher borrowing costs in the future.

- There will remain a cost of carry to any new borrowing which causes an increase in investments, as this will incur a revenue loss between borrowing costs and investment returns.

2.2.4 Borrowing Strategy

a. The Strategy

The Council is currently maintaining an under-borrowed position (see 2.2.1 above). This means that the capital borrowing need (the Capital Financing Requirement), has not been fully funded with loan debt, as cash supporting the Council's reserves, balances and cash flow has been used as a temporary measure. This represents "internal borrowing". This strategy is prudent since investment returns remain low, and counterparty risk is relatively high.

Against this background and the risks within the economic forecast outlined above, caution will be adopted with the 2016/17 treasury operations. The Chief Financial Officer will monitor interest rates in financial markets and adopt a pragmatic approach to changing circumstances:

- *if it was felt that there was a significant risk of a sharp FALL in long and short term rates (e.g. due to a marked increase of risks around a relapse into recession, or of risks of deflation), then long term borrowings will be postponed, and potential rescheduling from fixed rate funding into short term borrowing will be considered.*
- *if it was felt that there was a significant risk of a much sharper RISE in long and short term rates than that currently forecast, perhaps arising from an acceleration in the start-date and in the rate of increase in central rates in the US and UK, an increase in world economic activity or a sudden increase in inflation risks, then the portfolio position will be re-appraised with the likely action that fixed rate funding will be drawn whilst interest rates are still lower than they will be in the next few years.*

Any new borrowing will be discussed with CAS, and any decisions will be reported to Cabinet at the next available opportunity.

b. Treasury Indicators - prudent limits on borrowing activity (Appendix 1)

There are three debt related treasury activity limits (see Treasury Indicators (c) to (e) at Appendix 1), the purpose of which is to restrain the activity of the treasury function within agreed limits, thereby managing risk and reducing the impact of adverse movement in interest rates. However, if limits are set to be too restrictive they will impair opportunities to reduce costs or improve performance.

- An upper limit on fixed interest rate exposure. This identifies a maximum limit for fixed interest rates based upon the debt position net of investments.
- An upper limit on variable interest rate exposure. This identifies a maximum limit for variable interest rates based upon the debt position net of investments.

Members are asked to note that additional local indicators are also given for debt and investment individually, expressed as a percentage of the relevant totals.

- The maturity structure of borrowing. These gross limits are set to reduce the Council's exposure to large fixed rate sums falling due for refinancing, and are required for upper and lower limits.

2.2.5 Policy on borrowing in advance of need

The Council will not borrow more than, or in advance of, its needs purely to profit from the investment of the extra sums borrowed, since this is illegal. Any decision to borrow in advance of need will be within the forward-approved CFR estimates, and will be considered carefully to ensure value for money can be demonstrated, and that the Council can ensure the security of such funds.

In determining whether borrowing will be undertaken in advance of need, the Council will ensure that there is a clear link between the capital programme and the maturity profile of the existing debt portfolio which supports the need to take funding in advance of need. It will ensure that the on-going revenue liabilities created, and the implications for future plans and budgets have been considered, and evaluate the economic and market factors that might influence the manner and timing of any decision to borrow. The advantages and disadvantages of alternative forms of funding will be considered, together with the most appropriate periods over which to fund.

Risks associated with any borrowing in advance activity will be subject to prior appraisal and subsequent reporting through the mid-year or annual reporting mechanism.

2.2.6 Debt rescheduling

As short term borrowing rates will be considerably cheaper than longer term fixed interest rates, there may be potential opportunities to generate savings by switching from long term debt to short term debt. However, these savings will need to be considered in the light of the current treasury position and the size of the cost of debt repayment (premiums incurred).

The reasons for any rescheduling to take place will include:

- the generation of cash savings and / or discounted cash flow savings
- helping to fulfil the treasury strategy
- enhance the balance of the portfolio (amend the maturity profile and/or the balance of volatility)

Consideration will also be given to identifying any residual potential for making savings by running down investment balances to repay debt prematurely as short term rates on investments are likely to be lower than rates paid on current debt.

All rescheduling will be reported to Cabinet at the earliest meeting following action.

2.2.7 Municipal Bond Agency

The Municipal Bond Agency offers loans to local authorities at borrowing rates potentially lower than those offered by the Public Works Loan Board (PWLB). At the time of writing, the Agency is waiting for a framework agreement and thereafter will agree a timeline to the first bond issue with councils which intend to borrow. This Authority intends to make use of this new source of borrowing as and when appropriate.

2.2.8 Annual Investment Strategy 2016/17

The intention of the Annual Investment Strategy is to provide security of investment and the minimisation of risk. The aim is to generate a list of highly creditworthy counterparties which will also enable diversification and thus the avoidance of concentration risk.

a. Introduction

The three main rating agencies have, through much of the financial crisis, provided some institutions with a rating uplift due to implied levels of sovereign support. Commencing in 2015, in response to the evolving regulatory regime, all three agencies started removing these uplifts as part of the process of a reassessment of methodologies, which now take into account additional factors such as regulatory capital levels. Accordingly, sovereign ratings are now less important in the assessment process.

It is important to stress that the rating agency changes do not reflect any change in the underlying status or quality of an institution. They are merely reflective of a reassessment of methodologies in the light of enacted and expected future changes to the regulatory environment in which financial institutions operate. While some banks have received lower ratings as the result of the changes, this does not

mean that they are suddenly less creditworthy. Rather, in the majority of cases, it largely reflects the fact that sovereign support has been withdrawn and that they are now expected to have sufficiently strong balance sheets to withstand foreseeable adverse financial circumstances without government support.

b. Investment Policy

The Council's investment policy has regard to the CLG's guidance on Local Government Investments ("the guidance"), and the revised CIPFA Treasury Management in Public Services Code of Practice and Cross Sectoral Guidance Notes ("the CIPFA TM Code"). In accordance with this guidance, and in order to minimise the risk to investment, the Council applies minimum credit criteria to generate a list of highly creditworthy counterparties. This also enables diversification and thus the avoidance of concentration risk. The Council has clearly stipulated below at 2.2.8 (c) the minimum acceptable credit quality of counterparties for inclusion on its lending list. The creditworthiness methodology uses the CAS ratings service whereby banks' ratings are monitored on a real time basis with knowledge of any changes notified electronically as the agencies notify modifications.

All investments will be made in sterling, and since the risk appetite of the Council with regard to its investments is low, its general policy objective is the prudent investment of treasury balances. The Council's investment priorities are (in order of priority)

- The security of capital
- The liquidity of its investments
- The rate of return

The borrowing of monies purely to invest or on-lend and make a return remains unlawful, and the Council will not engage in such activity.

Investment instruments identified for use in the financial year are listed at Appendix 3 under "Specified" and "Non-Specified" categories.

Specified Investments:

An investment is a specified investment if all of the following apply:

- The investment is denominated in sterling and the payment or repayment is only payable in sterling.
- The investment is not "long-term", ie. it is made for less than one year.
- The making of the investment is not defined as capital expenditure.
- The investment is made with a body of high credit quality, or with the UK government, a local authority or a parish council.

Only minimal reference need be given to specified investments in the Annual Investment Strategy, and they will generally be used for cash-flow management.

Non Specified Investments:

Non-specified investments are all those not meeting the criteria for specified investments. Accordingly, they may be simple investments made with the same counterparties as specified investments, being “non-specified” only by way of the maturity period being over one year. Alternatively they may be more complex instruments, or those offering slightly higher risk or lower liquidity. If used at all, non-specified investments will tend only to be used for the longer-term investment of core-balances.

Appendix 3 also sets out:

- The advantages and associated risk of investments under the non-specified category.
- The upper limit to be invested in each non-specified category.
- Those instruments best used after consultation with the Council’s treasury advisers.

Counterparty investment limits will be as set out in the Council’s Treasury Management Practices (Schedules).

c. Creditworthiness policy

The primary principles governing the Council’s creditworthiness criteria are:

- Security of capital
- Liquidity of capital
- Return on investment

With regard to security, policies are maintained for “categories” of investment to be used, and these are set out at Appendix 3, specified and non-specified investments. For the purpose of liquidity, policies are in place for determining the maximum periods for which funds may prudently be committed with counterparties.

The Chief Financial Officer maintains a “counterparty list” and this is monitored constantly. The CFO has delegated authority to amend the minimum criteria as he sees fit, and will report any such amendments to Cabinet for information as necessary.

The Council applies the creditworthiness methodology provided by CAS for the selection of investment counterparties. This employs a

sophisticated modelling approach utilising credit ratings from the three main credit rating agencies (Fitch, Moody's and Standard & Poor's). The credit ratings of counterparties are supplemented with overlays for:

- Credit watches and credit outlooks from rating agencies
- Credit default swap (CDS) spreads to give early warnings of likely changes in credit ratings
- Sovereign ratings to select counterparties from only the most creditworthy countries

The CAS modelling approach combines credit ratings, credit watches and credit outlooks in a weighted scoring system which is then combined with an overlay of CDS spreads for which the output is a series of colour coded bands which indicate the relative creditworthiness of counterparties. These colour codes are used by the Council to determine the suggested duration of investments. The colour bandings used by the Council are as follows:

- Yellow 5 years (UK government debt or its equivalent)
- Purple 2 years
- Blue 1 year (nationalised or semi nationalised UK banks only)
- Orange 1 year
- Red 6 months
- Green 100 days
- No colour not to be used

The CAS creditworthiness service uses a wider array of information than just primary ratings. Furthermore, by using a risk weighted scoring system it does not give undue preponderance to one agency's rating. All credit ratings are monitored weekly and the Council is also alerted to interim changes via its use of the CAS creditworthiness service,

Ratings under the CAS methodology will not necessarily be the sole determinant for the use of a counterparty. Other information sources used will include market data, the financial press, share price and other such information pertaining to the banking sector in order to establish the most robust scrutiny process on the suitability of potential investment counterparties.

The Council has determined that it will only use approved counterparties from countries with a minimum sovereign credit rating of AA minus. The list of countries that currently qualify is shown at Appendix 4, but this list will be adjusted by officers in accordance with this policy should ratings change.

The ultimate decision on what is prudent and manageable for the Council will be taken by the Chief Financial Officer under the approved scheme of delegation.

Under the cash-backed Local Authority Mortgage Scheme, launched in April 2012, the Council has made two advances of £1m each to Lloyds Banking Group, each for a period of five years, to match the life of the indemnities. These are classified as “service investments”, rather than treasury management investments, and are therefore outside the Specified/Non specified categories discussed above.

d. Investment Strategy

The Council’s in-house managed funds are mainly cash-flow derived however, there has for some time been a core balance available for investment over a 2-3 year period, if appropriate. In addition, any borrowing undertaken in advance of need at favourable interest rates may add to the funds available.

Investments will be made with careful reference to any remaining core balance, to cash-flow requirements, and to the outlook for short-term interest rates (ie. for investments up to 12 months).

Bank Rate is forecast to remain unchanged at 0.5% before starting to rise from quarter 4 of 2016. Bank Rate forecasts for financial year ends are:

- 2016/17 0.75%
- 2017/18 1.25%
- 2018/19 1.75%

The overall balance of risk to these forecasts is currently to the downside, (ie. the start of increases in Bank Rate occurs later). However, if the pace of growth quicken and/or forecasts for increases in inflation rise, there could be an upside risk.

CAS have suggested the following budgeted investment earnings rates for investments up to 100 days for the next four years, however they acknowledge that given the balance of risk around Bank Rate being to the downside (above), rates achievable will potentially be lower.

- 2016/17 0.60%
- 2017/18 1.25%
- 2018/19 1.75%
- 2019/20 2.25%

The Council's outturn equated rate for 2015/16 is expected to be around 0.75%. As a result of fixed investments already secured and the expectation that rates will start to rise during 2016/17, the budgeted equated rate for 2016/17 is 0.86%.

An investment treasury indicator and limit must be set for the maximum principal funds invested for periods in excess of 364 days in the forthcoming and two subsequent years (ie. new non-specified investments). The limit for each year is set with regard to the Council's liquidity requirements.

The treasury indicator and limit for new non-specified investments in each of 2016/17, 2017/18 and 2018/19 is £3m, as detailed at Appendix 1 (treasury indicators) (f), subject always to the overall limit for total non-specified investments held at any one time indicated at Appendix 3.

e. Investments defined as capital expenditure

The acquisition of share capital or loan capital in a body corporate is defined as capital expenditure under regulation 25(1)(d) of the Local Authorities (Capital Finance and Accounting) (England) Regulations 2003. Such investments will have to be funded out of capital or revenue resources, and will be classified as non-specified investments.

Investments in "money market funds", which are collective investment schemes, and bonds issued by "multilateral development banks", both defined in SI 2004 No 534, will not be treated as capital expenditure.

A loan or grant or financial assistance by this Council to another body for capital expenditure by that body will be treated as capital expenditure.

f. Provision for credit-related loss

If any of the Council's investments appear to be at risk of loss due to default, this is a "credit-related loss" and not a loss resulting from a fall in price due to movements in interest rates. In such an instance, the Council will make revenue provision of an appropriate amount.

g. End of Year Investment Report

At the end of the year, the Council will report on its investment activity as part of its Annual Treasury Report.

h. Policy on the use of external service providers

The Council uses CAS as its external treasury management advisers,

however it recognises that responsibility for treasury management decisions remains with the organisation at all times, and will ensure that undue reliance is not placed upon external service providers.

The Council also recognises that there is value in employing external providers of treasury management services in order to acquire access to specialist skills and resources. The Council will ensure that the terms of their appointment and the methods by which their value will be assessed are properly agreed and documented, and subjected to regular review.

2.2.9 Gedling Borough Council scheme of delegation

Full Council is responsible for:

- Receiving and reviewing reports on treasury management policies, practices and activities
- Approval of the annual strategy (TMSS)
- Annual budget approval

Cabinet is responsible for:

- Approval of, and amendments to, the Council's adopted clauses, treasury management policy statement and treasury management practices
- Budget consideration and virement approval
- Approval of the division of responsibilities
- Receiving and reviewing regular Treasury Management monitoring reports, and acting on recommendations
- Approving the selection of external service providers and agreeing terms of appointment.

Audit Committee is responsible for:

- Reviewing the treasury management policy and procedures and making recommendations to the responsible body.

2.2.10 The role of the section 151 officer

The Chief Financial Officer is the Council's nominated S151 Officer.

The role of the S151 (responsible) officer includes the following:

- Recommending clauses, treasury management policy/practices for approval, reviewing these regularly, and monitoring compliance
- Submitting regular treasury management policy reports
- Submitting budgets and budget variations
- Receiving and reviewing management information reports

- Reviewing the performance of the treasury management function
- Ensuring the adequacy of treasury management resources and skills, and the effective division of responsibilities within the treasury management function
- Ensuring the adequacy of internal audit, and liaising with external audit
- The appointment of external service providers

Alternative Options

There are no alternative options, this report being a statutory requirement.

Financial Implications

No specific financial implications are attributable to this report.

Appendices

1. Prudential and Treasury indicators for 2016/17 to 2018/19
2. Interest rate forecasts
3. Specified and non-specified investments
4. Approved countries for investment

Background Papers

None identified.

Recommendation

That:

Members note the Prudential Indicators and Treasury Strategy 2016/17 as detailed in the report, and refer it to Full Council for approval as required by the regulations.

Reasons for Recommendations

To comply with the requirements of the Local Government Act 2003, the CIPFA Prudential Code, CLG MRP guidance, the CIPFA Treasury Management Code and CLG investment guidance.
